

Unlocking Pre-Provision Net Revenue

Diving into the Power of Interest Income

Mentor:
Dr. Kristina Martin

Team:
Harshita Agrawal, Meaghan Allen, Obed Domson,
Yixuan Huang, Sebastian Jaramillo

Federal Reserve Bank

Stress Test

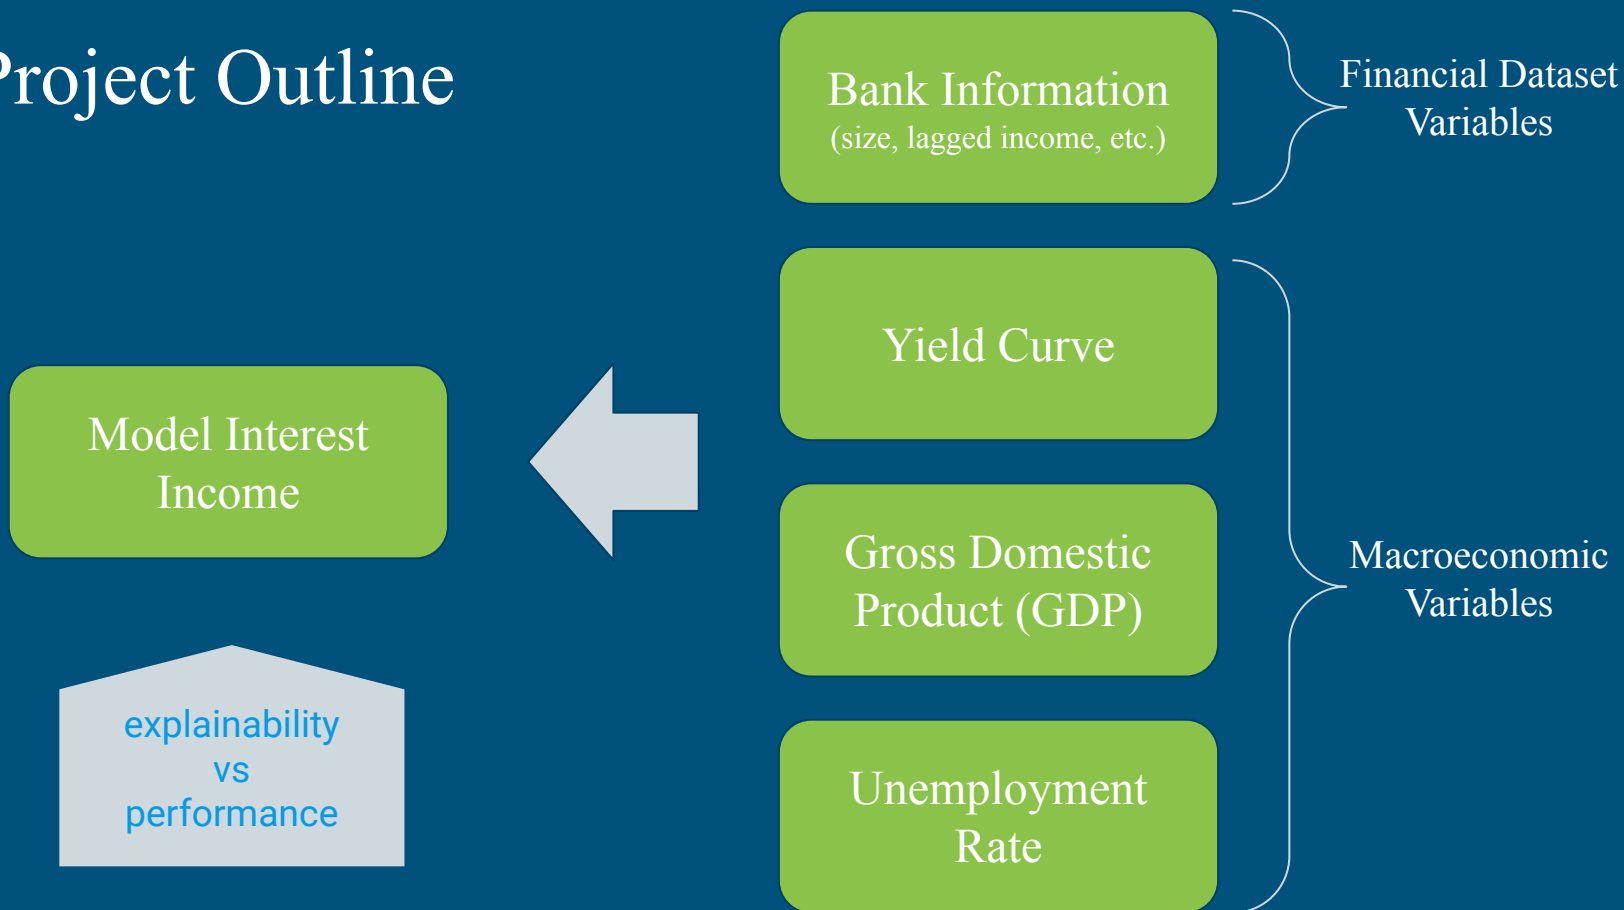

evaluates resilience of large financial institutions to withstand economic shocks

Pre-provision Net Revenue (PPNR)

Interest Income - Interest Expense +
Noninterest Income - Noninterest Expense

Project Outline

Data

- Financial Data
- Macroeconomic Data

Financial Data

Data Info

Variables

Macroeconomic Data

Yield Curves

Macroeconomic Data

Yield Curves

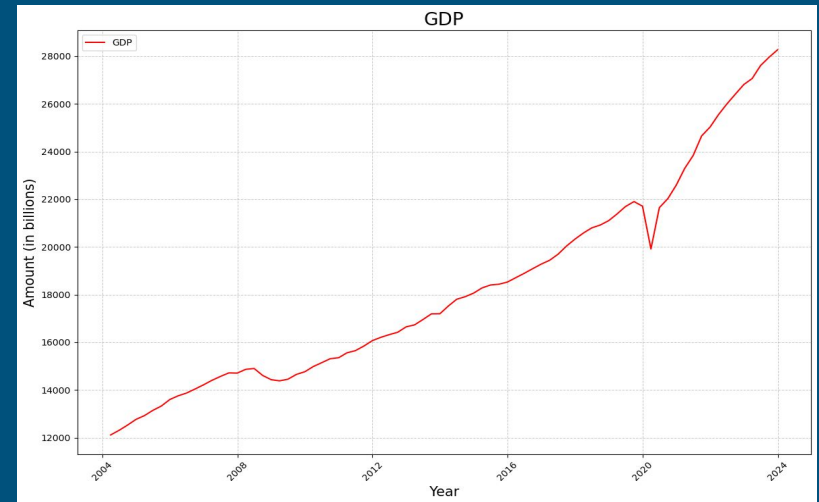

- Periods where short term yields were higher than long term
- Bad sign for economy

Macroeconomic Data

Unemployment Rate

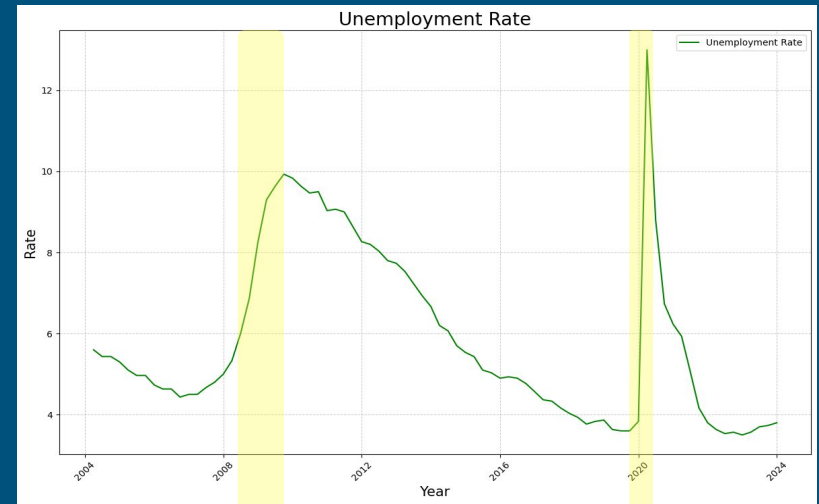

Gross Domestic Product (GDP)

Macroeconomic Data

Unemployment Rate

- Unemployment Rate spiking

Gross Domestic Product (GDP)

- GDP decreasing

Models

- Linear Regression
- Regression Trees
- Random Forest

Linear Regression

- Normalized Interest Income vs

- Macroeconomic indicators

$$R^2 = 0.44$$

Linear Regression

- Normalized Interest Income vs

- Macroeconomic indicators

$R^2 = 0.44$

- Macroeconomic + Lagged Income

$R^2 = 0.81$

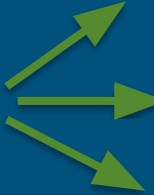

Linear Regression

- Normalized Interest Income vs

- Macroeconomic indicators  $R^2 = 0.44$
- Macroeconomic + Lagged Income $R^2 = 0.81$
- **Lagged Income ONLY** $R^2 = 0.79$

Linear Regression

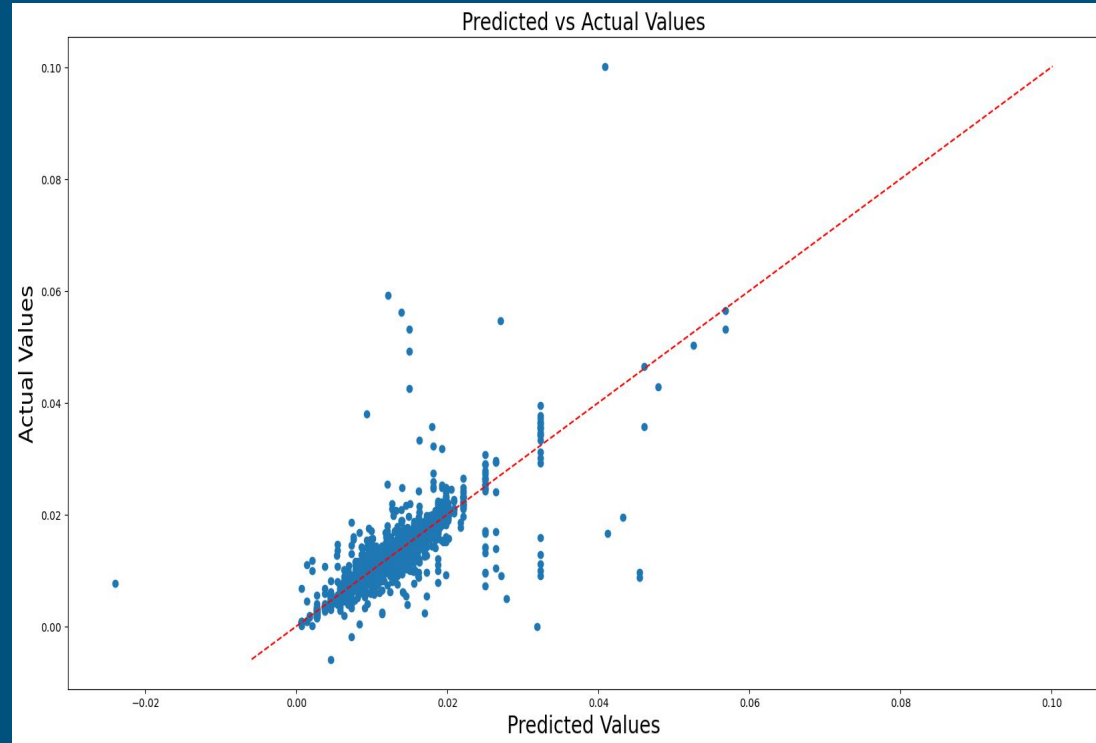

- Normalized Interest Income vs

- Macroeconomic indicators 
 - 3-mo, 10-yr
 - Unemployment $R^2 = 0.44$
 - GDP
- Macroeconomic + Lagged Income $R^2 = 0.81$
- **Lagged Income ONLY** $R^2 = 0.79$

Lagged Income is the feature with most importance!

Regression Trees

- Variables:
 - Macroeconomic indicators
 - Lagged Income + Total Assets
- R^2 score = 0.81
- Red line: perfect prediction

Regression Trees

Top Important Features:

- Lagged Income
- Total Assets
- Unemployment Rate

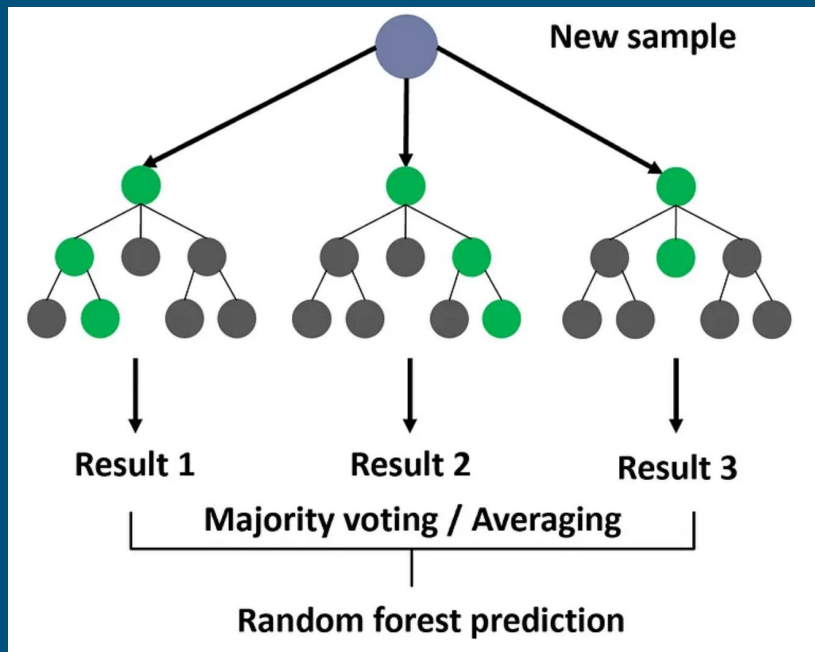

Random Forest

HOW?

- Multiple Subsets of Data
- Train Decision Trees for Each Subset
- Aggregate Predictions

PROS:

- High accuracy
- Robustness

CONS:

- High complexity
- Hard to interpret

Random Forest

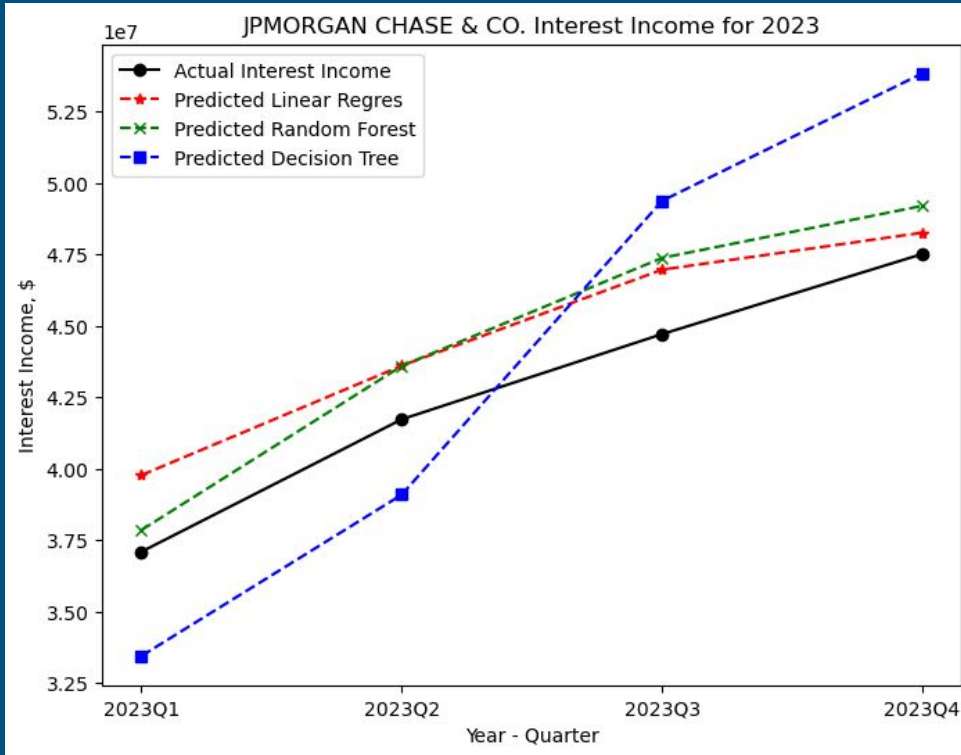

- Macroeconomic indicators 
 - 3-mo, 10-yr
 - Unemployment
 - GDP $R^2 = 0.45$
- Macroeconomic + Lagged Income $R^2 = 0.81$

Results

- 2023 Predictions
- 2008 Crisis
- 2020 Pandemic
- Conclusion
- Future Work

2023 Prediction Accuracy for JP Morgan Chase

Linear Regression:

- Oversimplify complex relationships.
- Do not capture non-linear effects.

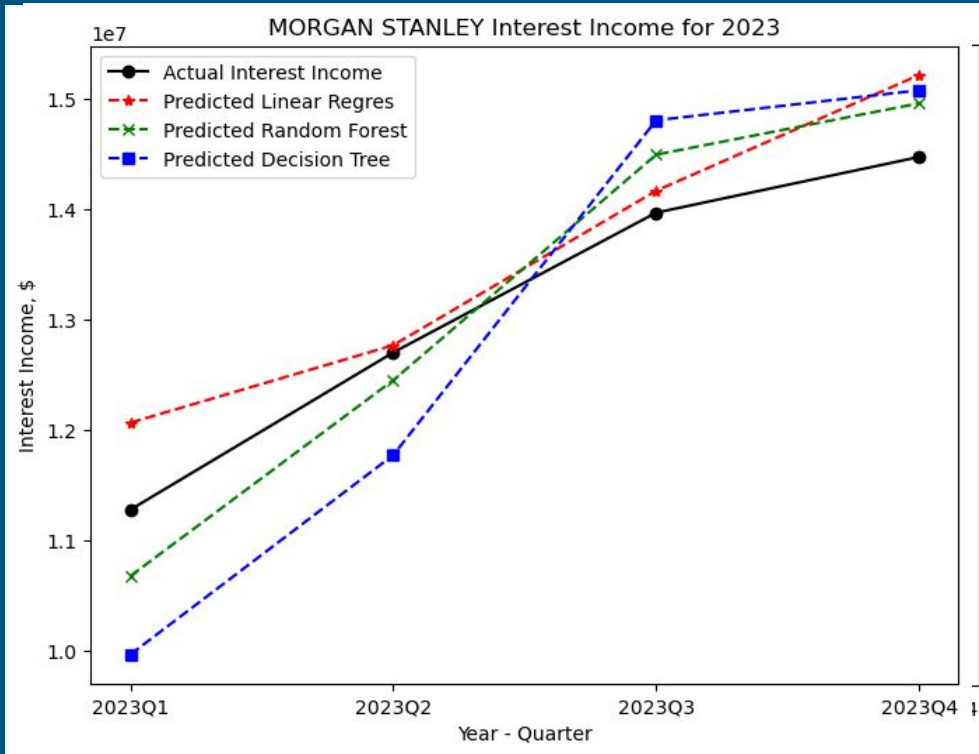

Decision Tree:

- Sensitive to fluctuations.
- Might overfit the data

Random Forest:

- Robust
- Strong prediction for 1st Quarter
- Follows the trend.

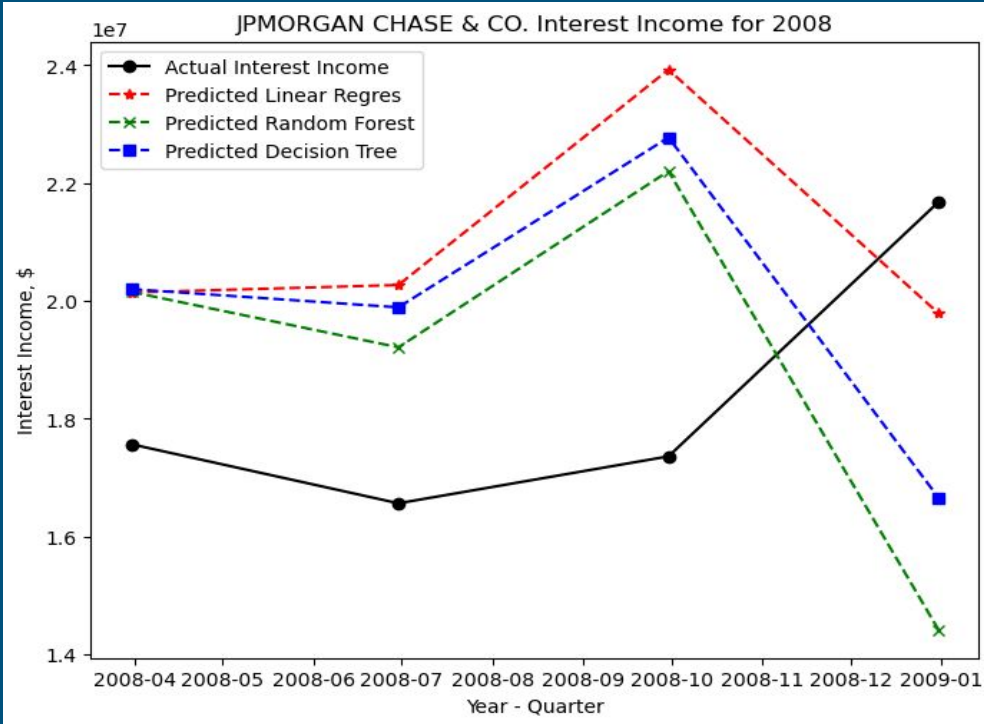

2023 Prediction Accuracy for Morgan Stanley

Similar patterns

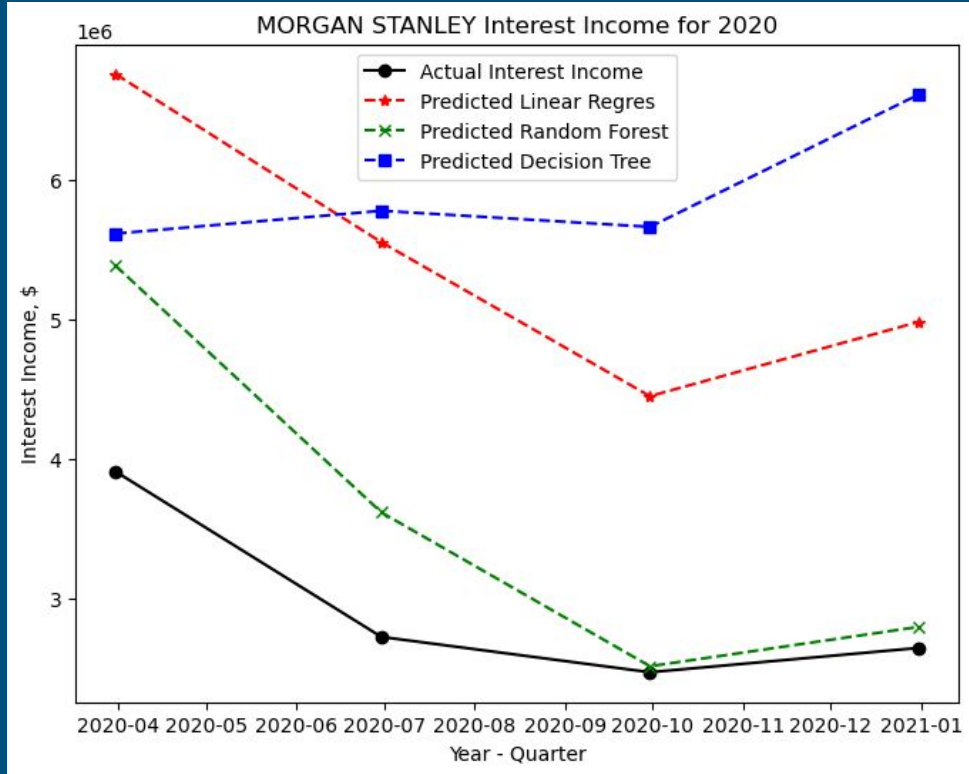

- Robustness shown by Random Forest
- Follows the trend
- Good 1st and 4th Quarter Prediction

2008 Crisis Predictions for JP Morgan Chase

- Good predictions for first 3 quarters.
- Deviates in the fourth quarter.
- Models do not undergo overfitting.

2020 Pandemic Predictions for Morgan Stanley

- Robustness shown by Random Forest
- Follows the trend
- Good 3rd and 4th Quarter Prediction

Conclusions

- Exploration of multiple modeling approaches
- Importance of features in the prediction for interest income
- Accurate prediction, not overfitting

Future Work

- Feature Engineering and Selection
- Real-Time Data Integration
- Hybrid Models
